2022

The Incubation
Network Presents

**SCALE 100t
PROGRAM**

THE PROBLEM

Between **75 million** and **199 million tonnes** of plastic waste are currently found in the oceans.

This is according to a United Nations Environment Programme (UNEP) report titled From Pollution to Solution: A Global Assessment of Marine Litter and Plastic Pollution. This figure is set to triple by 2040 if actions are not taken to mitigate the growing crisis. Beyond exploring new alternatives to plastic and other methods to cut down on commercial demand for plastic, the need to refine our waste collection and management practices has never been more pressing.

Developing effective disposal, collection, and sorting pathways boosted by technology and innovation will help waste management companies to increase the rate at which they can recover and process plastic waste, scaling potential to reduce plastic leakage.

THE PROGRAM

Diverting Plastic Leakage with Increased Capacity

In partnership with the Alliance to End Plastic Waste, SCALE 100(t) is a new accelerator program for startups and waste management companies operating in South and Southeast Asia. This program is designed to increase the cohort's processing capacity such that they are able to process an additional 100 metric tonnes and beyond on an annual basis.

The Incubation Network will focus assistance on supporting ventures to refine their business capabilities and scale solutions that lead to measurable increases in their ability to process plastic.

Each cohort participant will be given a customized growth program designed specifically for their identified milestone and project proposals. After completing a business assessment, the companies will receive support in the form of Business Consulting, Mentorship, Technical Assistance, Milestones Setting & Evaluation, and Funding of over US\$350,000 across the cohort.

THE COHORT

3 startups & companies
across growth to mature stages

Operations based in
South and Southeast Asia

Fall under any of these solutions:

-  **Diversion**
-  **Collection**
-  **Sorting**
-  **Recycling**

FOCUS

To grow their operating capacity by end of 2022 to accommodate an **increase of at least 100 metric tonnes of processing capacity per year.**

This challenge is implemented by **The Incubation Network** in partnership with **Alliance to End Plastic Waste**

Wongpanit Krabi Co., Ltd. Thailand

[LinkedIn](#) | [Facebook](#) | [Instagram](#) | [Website](#)

Meet the Team

Wongpanit Krabi Co., Ltd. is a company specialized in collecting and recycling plastics and wastes by sorting, compressing and shredding into bales and flakes. The main goals of the company are to fight environmental pollution and support the concept of a circular economy. They work with local collectors, recyclers, local enterprises/people, municipalities and private people, whom they buy wastes and plastic from.

The Solution

Plastics For Change India

[LinkedIn](#) | [Facebook](#) | [Instagram](#) | [Youtube](#) | [Website](#)

Plastics For Change is Asia's largest supplier of Fair trade Ocean Bound Plastic and their tech-driven platform ensures a fair price, improves transparency, consistent quality in the recovery and segregation of "ocean-bound" plastic from coastal areas in India whilst providing livelihood opportunities for waste pickers and scrap entrepreneurs.

The Solution

Plastics for Change was launched with a mission to use plastic waste as a resource for addressing social issues. With over two billion people living on less than \$2.00 a day, there is an enormous opportunity to reduce poverty through recycling. They have been on a mission ever since its inception - to bring recycling infrastructure to developing regions and create jobs for some of the most marginalised members of society.

ReCircle India

[LinkedIn](#) | [Instagram](#) | [Website](#)

ReCircle's purpose lies in harnessing the unutilized value inherent in waste. ReCircle aims to divert waste from festering in landfills and water bodies by building sustainably advantaged, innovative systems to retrieve and repurpose waste, all whilst bolstering the human capital of our nation's disadvantaged informal waste-workers.

ReCircle's growth is channeled through a dynamic multi-stakeholder approach; they create robust partnerships with individual consumers, multinational brands and urban local bodies.

The passion of their people and the power of future-focused technologies has enabled them to bring their goal to fruition and scale. Resource recovery is as urgent as it is inexorable; and ReCircle is determined to lead the way to a better future for mankind.
